ᴅR⟫◇(ᴅ()ᴄ ✖algorithms: <u>Linear</u> private data.

DRYBEDOC✖algorithms can not be decyphered by numerical computation.

Two unique, infinitely variable, <u>directional</u> data, algorithms : Alphabetic-Geometric : that may, or may not, agree in value. If they do; information. If they do not; no information. Each algorithm is naturally a no-overlay-one-time-pad. Existing characters can not be removed or substituted; additional characters can not be added. Any alteration effects the dual agreement and will be detected.

Each DRYBEDOC✖algorithm has a unique solution formula.

ᴅR⟫◇(ᴅ()ᴄ ✖algorithm formula:
"Solve the message"

DRYBEDOC✖data can be produced algorithmically in unlimited quantity;
DRYBEDOC✖algorithms can be delivered in many different styles and reproduced for solution by ᴅR⟫◇(ᴅ()ᴄ ✖algorithm formula.
The following four styles can be algorithmized with the same information.

1. Blank - No characters transfer

2. Single character - ⬚

3. DRYBEDOC✖square = 169 characters
